

Purpose of the Field Days

Urban Living Labs - Stem School Challenge

While student groups will focus on one issue or problem in one Area of Focus that they have identified through the ThinkTank process (or via other mechanisms) An important principle of the Sydney Science Park Urban Living Lab School STEM Challenge is that any new processes or technologies can impact other focus areas. These impacts can be either positive or negative impacts.

The Field days are designed to achieve two aims.

1. The first is to allow the students to see the Sydney Science Park as an example of urban development to help the formulation of their project.
2. The second is to ensure that the students are exposed to issues in the other Areas of Focus and could provide ideas that further enhance their own project concepts.
